

Formerly Clustermarket

Smart equipment booking for R&D LabOps professionals

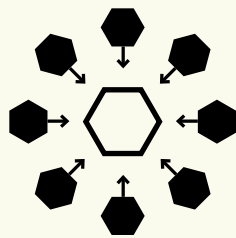

Calira is a lab operations platform used by over 1,800 labs across 52 countries to streamline equipment booking, track utilisation, plan CapEx investment, and reduce downtime. Whether you're managing a single lab or scaling across global R&D sites, Calira gives LabOps teams the tools they need to move with confidence.

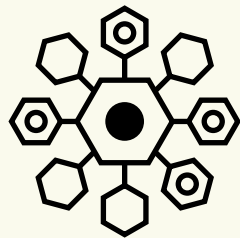

Core capabilities

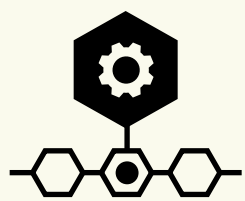

Equipment management and inventory

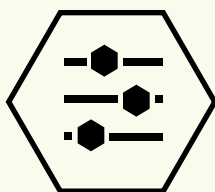

Easy instrument booking for lab users

Structured lab usage data extraction

Maintenance tracking and reminders

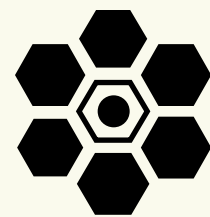

User management and access controls

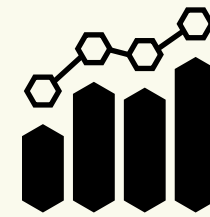

Notifications and announcements

Key benefits

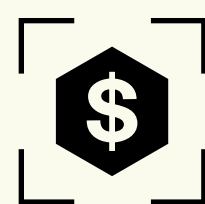

Improve equipment visibility

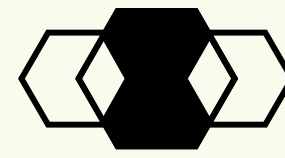

Track utilisation in the lab

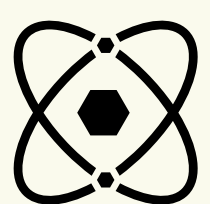

Prevent equipment downtime

Plan CapEx with clean data

Reduce booking conflicts

Get structured, AI-ready data

Trusted by our key partners

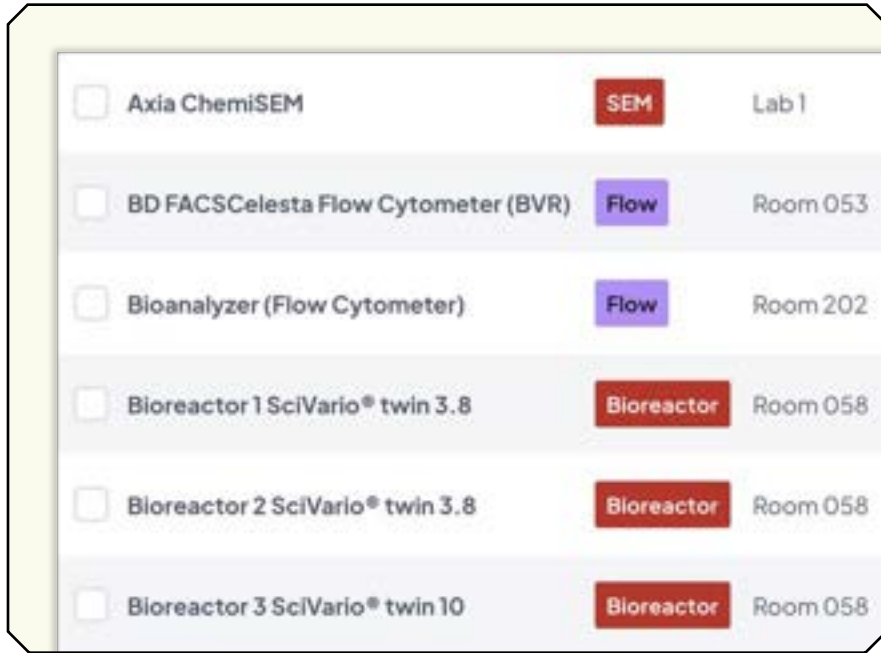

"Calira has improved the process of booking laboratory equipment in our R&D teams... and allowed us to gather data for equipment usage with ease."

Nicole Williams
R&D Lab Manager

Core features

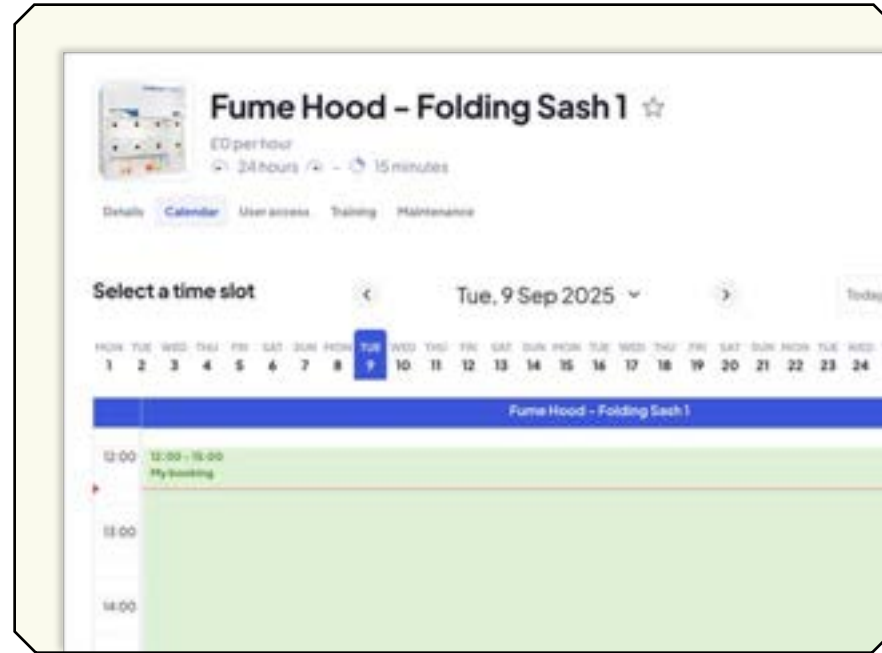

Improve equipment visibility

Replace disconnected spreadsheets and uncertainty with a searchable, manageable, and metadata-enriched equipment directory for a single lab, or a whole organisation.

Track maintenance activity in realtime

Schedule and block off equipment for maintenance and calibration, assign tasks to contractors, and keep lab users in the loop about what's going on.

Make it easy for lab users to book

Give lab users an easy, visual way to book equipment that keeps track of availability, reduces conflicts, and helps teams plan work with confidence.

Export structured data for reporting

Report on equipment usage, maintenance, and downtime with data exports filtered by labs, groups, or users. Support reporting needs across ops, compliance, and finance.

Our impact

Up to **14%**

Typical improvement in R&D equipment utilisation one year after deployment

“Equipment booking just isn’t an issue for me anymore.”

Bishoy Habib
Lab Manager

Lonza

“Calira helped streamline procedures in our R&D labs, which improved communication and ensured we had an accurate way to track our instrument utilization.”
